

Yes, Very! is the short answer. We encrypt all pages that contains potentially sensitive information and store only a bare minimum of your card details on our database. We do **not** store your card number or security number and at no point do any of our staff have access to your full card details.

Card Payments

We store the following information of your card:

- Name on the card
- Last 4 numbers of your card (So you can identify the card when placing orders)
- Expiry Date

All card payments are processed by PayPoint (Formerly known as Secpay) and any new card details are entered securely directly on their servers.

Security

We encrypt pages that may contain potentially sensitive information with 256 bit encryption to offer you peace of mind. This makes it extremely difficult (and unlikely) for an unauthorized person to intercept your card details.
